TOWER SQUARE

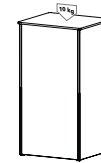

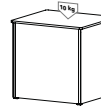

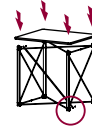

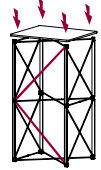

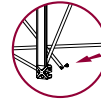

- Remove the structure from the packaging and place it on the floor, so that the hubs with three magnets are on the top.
- Hold the structure by the tubes above the hubs marked in the picture.
- Lift the structure, so that the marked hubs are pointing towards you, and expand to its full size.
- Place the erected structure on the floor.
- Unwrap the magnetic bars and attach them to the magnets in the hubs.
- The structure is ready for installing the graphics.

Never slide the magnetic bars on top of each other, it would damage the magnetic field!!!

- It is advisable to allow the graphic panels to lie flat for about 30 min. before placing onto the structure.
- The graphic panels are attached by hanging the magnetic hanger onto the magnets in the top row of hubs
- Always roll the graphic panels with the printed side outwards.

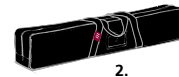

Please note:

- A top desk is available for EUROtowers 1 and 2. It is to be placed onto the metal rods on the top of the tower.
- To provide the maximum stability with EUROtower square 1 and 2 we recommend using the reinforcement bars.
- Please note that, when using the top desk it is necessary to use the reinforcement bars. The reinforcement bar should be attached to the special inserts in the diagonal hubs using the screws provided.
- To attach the lights use the square connector for lights.
- Max. load of table: 10 kg
